

PLEASE NOTE

Starting up Procedures

When starting units for the first time or after a power failure. Please follow these instructions.

- 1. Insert the Three Pin plug into GPO and wait 5 minutes.**
- 2. NEXT...Turn the right hand key clockwise, 90 degrees to the (ON) position.**

All the ETN4 dispensers should turn on. The counters, the backing lights and all the units should be in the ready to dispense mode.

- 3. If not, turn the RESET key to 90 degrees clockwise, count 5 and return to vertical position and PLEASE REMOVE THIS KEY.**

- 4. If there are full bottles mounted on each ETN4 and one dispense is done to each unit, this proves the system is ready to operate.**

- 5. When closing down at night it would be good practise to turn the units off by the right hand key.**

NB Leaving the reset key in the reset position will damage both the Power Pack and all the ETN 4's.

REMEMBER, the left hand key slot should always be left in and operated in the vertical position.
